PROFESSIONAL SUMMARY

A Computer Science graduate with a strong interest in frontend development and Laravel application development. Skilled in building responsive web interfaces and developing web applications using HTML, CSS, JavaScript, PHP, Laravel, and database technologies. Experienced in developing personal projects, including a Laravel-based flight search application, with practical exposure to database integration, user authentication, and application development workflows.

A motivated and adaptable learner with problem-solving skills, attention to detail, and a passion for creating functional, user-friendly digital solutions. Seeking an entry-level frontend development, Laravel development, or ICT opportunity to apply technical knowledge, gain professional experience, and contribute to real-world projects.

TECHNICAL SKILLS

- **Frontend Development:** HTML5, CSS3, JavaScript
- **Backend Development:** PHP, Laravel

- **Databases:** MySQL, SQLite
- **CSS Frameworks:** Tailwind CSS
- **Version Control:** Git and GitHub
- **Development Tools:** Visual Studio Code, Laragon
- **Other Skills:** Responsive Web Design, Database Integration, User Authentication, Problem Solving, Debugging
-

PROJECTS

SkyBook – Flight Booking System

Personal Project | Laravel, PHP, SQLite, Tailwind CSS

- Developed a Laravel-based flight search application that allows users to explore available flights.
- Designed and implemented a flight database containing flight numbers, airlines, departure and arrival locations, schedules, prices, and seat availability.
- Implemented flight search functionality connected to the database.
- Integrated user registration and login functionality.
- Used Tailwind CSS to develop the application's user interface.
- Currently developing additional functionality, including flight booking and booking management.

Project Status: In Development

Agricultural Marketplace Concept

Independent Project Research | Proposed Laravel Application

- Conducted initial research into the challenges crop farmers face when accessing reliable buyers and agricultural market information.
- Explored a digital marketplace concept intended to connect farmers with potential buyers.
- Identified potential application features and user needs to guide future development.
- Developed an initial concept for a Laravel-based solution targeting agricultural communities in Eldoret and Uasin Gishu County.

Project Status: Research and Planning

EDUCATION

Bachelor of Science in Computer Science

Chuka University
2021 – 2025

- Relevant areas of study include programming, database management, software development, computer networks, and information technology.

PERSONAL AND PROFESSIONAL SKILLS

- Problem-solving and analytical thinking
- Communication and teamwork

- Willingness to learn new technologies
- Adaptability and time management
- Attention to detail
- Independent learning and research

CAREER OBJECTIVE

To grow as a frontend and Laravel developer by contributing to practical software development projects, strengthening my technical skills, and gaining professional experience in a collaborative technology environment.
